

## Wireless IP Addressable Parking Lot Camera

SecureMasterUSA has developed a new line of IP Addressable, parking lot cameras. The cameras are high resolution color cameras that feature Sony SuperHAD CCDs.

They come in either a fixed camera (stationary) model, or a professional, casino style, High-Speed Dome that can scan 360 degree. The cameras are accessible by using a LAN, a WAN, or with a Hand-Held or cell phone.

Through the 3G Global Router, the IP Camera can record images to a remote location (like a Data Storage Bunker), and the images can be archived for up to 5 years.

In addition, all PCs connected to the LAN can share the Internet Connection with the camera, thereby saving a lot in Internet connection fees.

And, if more cameras exist in another location, they can be accessed by a CMS (Central Monitoring Software) program, and all cameras can be viewed on one screen.
